

FTTH pre-term indoor Install directly out of the box

04.2024

Save time. Save costs

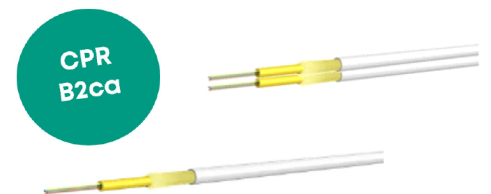

The pre-wound box allows lightning-fast and effortless indoor installation, eliminating the need for on-site cable preparation. This significantly reduces labor time in customers'

Push-or-pull solution

This is the markets' only solution with a flexible cable, enabling to push or pull the wire cable through the pipe, splice it, and connect it to the home effortlessly. It comes with a feed eyelet at one end.

Quality and performance

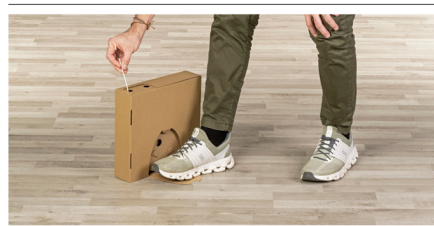

The CPR B2ca-certified cable is ideal for FTTH indoor use. It remains flexible during installation and can be blown-in up to 350m. Aramid screw bracket ensure maximum strain relief.

Easy split

It's currently the only solution with a zip-cord cable that can be easily split into two bundles without the need for additional tools. For a simple division of the fibers between operator and 3th provider.

Effortless with one hand

The cable can be easily pulled straight out of the packaging. Simply open the lash at the side of the box, fix it with your foot, and pull the feed eyelet cable ending. Indoor installation has never been easier

100% recyclable packaging

Protect the environment. This packaging is made of 100% paper and fully recyclable. It can be disposed and recycled at any waste paper station.
