HUBER+SUHNER position regarding radioactive substances – directive 2013/59/EURATOM (directive 96/29/EURATOM is repealed since 2013)

This Directive establishes uniform basic safety standards for the protection of the health of individuals subject to occupational, medical and public exposures against the dangers arising from ionizing radiation.

HUBER+SUHNER confirms that it does not manufacture, produce, process, handle, dispose of, use, store, hold, or transport radioactive material, nor does import it to, or export it from the European Union.

The products of HUBER+SUHNER are not designed to emit or create ionizing radiation and do not contain components operating at a difference in potential of more than 5 kilovolt (kV). Workers or members of the public will not be exposed to ionizing radiation next to products of H+S.

Best Regards,
HUBER+SUHNER AG

Judith Mueller
Head of PQM, RF Division

Stefan Metz
Head of PMD, RF Division
