

E-2000™ Performing above and beyond

09.2019

Pre-assembled housing

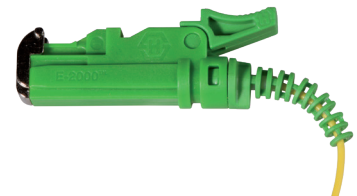

The new pre-assembled housing eliminates the pressing process after polishing. This reduces the duration of the termination process and allows, for the first time, simple re-polishing.

Increased performance

The newly designed inner part of the connector offers a reduced stiffness which means that the influence of side force is reduced. As a result, the connector delivers a significantly increased performance.

Pigtail variations

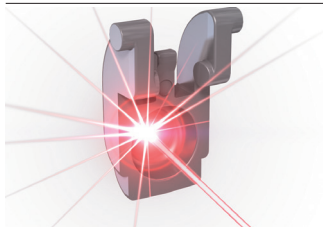

The new boot with snap mechanism offers an outstanding bending performance. The combination of the shortest rigid length and the very flexible boot makes the connector suitable for many new applications.

Protection

A spring-loaded automatic shutter mechanism provides enhanced safety and protects the ferrule when the connector is unplugged.

Safety

Unlike other E-2000 suppliers, HUBER+SUHNER provides connectors and adapters always with a precision metal protection shutter which ensures a 100 % light blocking capability.

Compatibility

The new E-2000 connector is fully compliant with IEC 61754-15 and tested according to IEC 61753-1 and GR-326.
